Amendments to the Claims

- 1. (Original) A method for reproducing an original image on an image carrier comprising the steps of :
- generating a conjoined first and second sub-image, each representative for a portion of said original image;
- defining an overlap region as a region where both subimages give a contribution to the integral optical density
 of the image carrier;
- establishing for each sub-image a peripheral edge in said overlap region;
- increasing said contribution by said first sub-image from said peripheral edge of said first sub-image to said peripheral edge of said second sub-image.
- 2. (Original) The method according to claim 1, comprising the steps of :
- dividing said overlap region in a partition of microdots;
- assigning to at least one microdot an intermediate microscopic density substantially different from a minimum and maximum microscopic density of said microdots.
- 3. (Cancelled).

- 4. (Cancelled).
- 5. (Cancelled)
- 6. (Original) An imaging system for reproducing an original image by an imaging device on an image carrier comprising:
- means for generating a conjoined first and second subimage, each representative for a portion of said original image;
- means for defining an overlap region as a region where both sub-images give a contribution to the integral optical density of the image carrier;
- means for establishing for each sub-image a peripheral edge
 in said overlap region ;
- means for increasing said contribution by said first subimage from said peripheral edge of said first sub-image to said peripheral edge of said second sub-image.
